

# DR. SAM CHACHOUA

- Shattering the Myth of Incurable Disease with Induced Remission Therapy (IRT)
- The Birth of a New Medical Science in the Healing of Cancer, AIDS & Other Terminal Conditions.
- Cutting Edge Advances in Vaccines and Supplements with Unprecedented Efficacy Against Cancer and AIDS.
- X-ray Proven Shrinkage of Cancer within Days
- Restoration of Immune Competence & Viral Elimination.

Dr. Sam Chachoua, Australian medical doctor, scientist, researcher and sole developer of this amazing treatment, discusses its development, efficacy and conspiracy of suppression.

## *Mankind's Most Fervent Prayers, Hopes & Dreams Now a Reality.*

REAL Science, REAL Medicine, REAL Proof of the Elimination of Many Cruel Faces of Death.

### **ORIGINS**

A young child disillusioned with modern medicine's impotence in arresting his father's cancer. A family that explored all conventional and alternative therapies only to realize that both fields promise much but deliver little. When the life of a loved one is involved, could anything less than total healing be a satisfactory objective? With chemotherapy, surgery and radiation, nausea, disfiguration, hair loss and other therapeutic torments often leading to an accelerated demise, how far we are from our goal! Searching for answers, the young son, Sam Chachoua, studied and researched, hoping to find some clue or pathway that had somehow been overlooked. He would investigate three phenomena: Organ Resistance, Species Resistance and Spontaneous Remission.

### **ORGAN RESISTANCE**

Disease may ravage the body, but will almost always spare some site. Cancer can spread and involve most systems and organs but rarely involves the small intestines. What if the small intestine harbored some intrinsic

others. HIV, for example, will only infect humans with deadly consequences. Most animals tested will reject attempted infection. Why not use an animal's immune response to generate passive vaccines against AIDS?

Before the pharmaceutical age, doctors used horse sera in the treatment of Rabies, Polio, Small Pox and other plagues. Why not employ the same logic today?

The ability to raise passive vaccines and Dr. Chachoua's ability to transfer resistance to human cells enables the neutralization of the viral mutation problem with other therapies. The success of this approach has been remarkable, both in the laboratory as well as in humans.

### **SPONTANEOUS REMISSION**

The study of these miracles of nature where incurable disease magically disappears has led many scientists to conclude that certain infections are capable of destroying cancer tissue (cf. Coley, Didot, Duffy). The relationship between infections and cancer was further expanded upon by investigators such as Scott, Glover and Livingston. Largely ineffective vaccines were developed by these scientists. Dr. Chachoua developed thousands

resistant factor? While still a medical student and the youngest presenter of independent research at the COSA (Clinical Oncological Society of Australia), in 1981, Sam Chachoua would present his findings and a devastatingly effective immune process he had identified and used to heal animals of cancer.

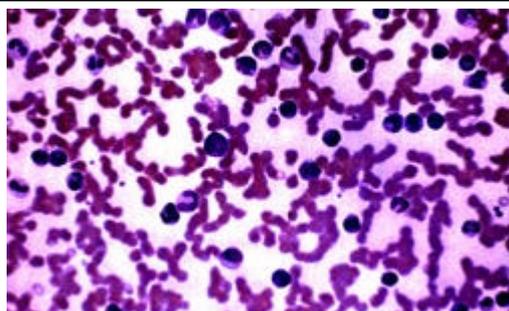

**ORGANISM RESISTANCE**

This well-known phenomenon relates to the ability of some animals to be totally resistant to diseases that are lethal to

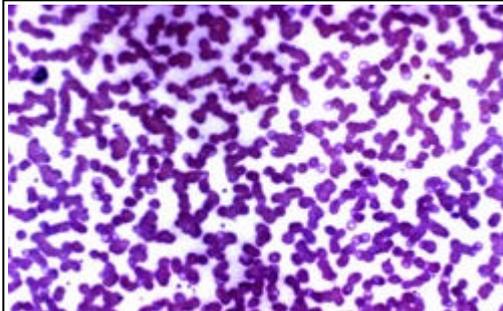

of vaccines and therapeutic products based upon this phenomenon. He was also able to elucidate the real cause and function of cancer.

His vaccines include tagging agents capable of attaching themselves to the cancer cells and making them immunologically tempting targets as well as a battery of specific, non-toxic therapies. The shrinkage of large cancer lesions within days and the disappearance of symptoms can be expected and delivered.

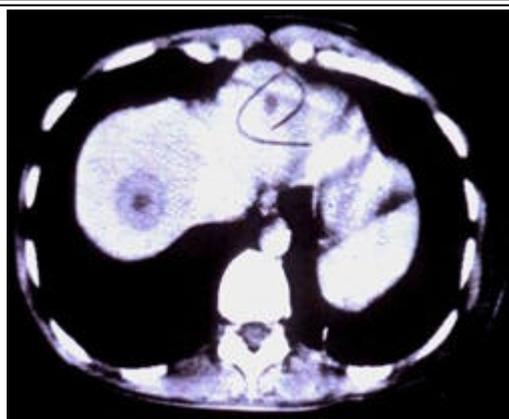

**PROOF: THE FOLLOWING X-RAYS, BONE SCANS, MRIs & EKGs, TAKEN AT MAJOR HOSPITALS AND RESEARCH INSTITUTES, offer INDEPENDENT PROOF OF THE MEDICAL MIRACLES OF INDUCED REMISSION THERAPY (IRT)**

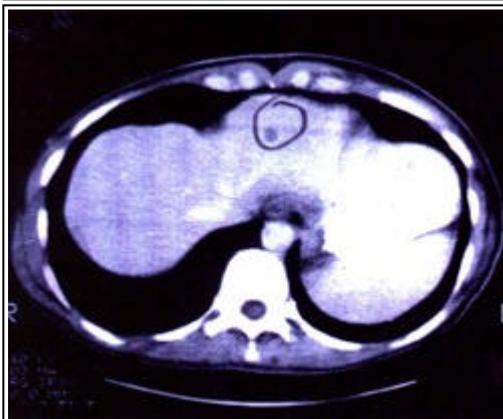

BEFORE: Leukemia cells (blue abnormal cells).

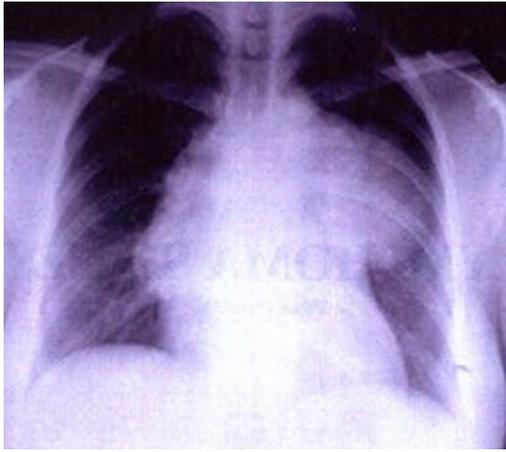

AFTER: Resolution after 1 week of treatment.

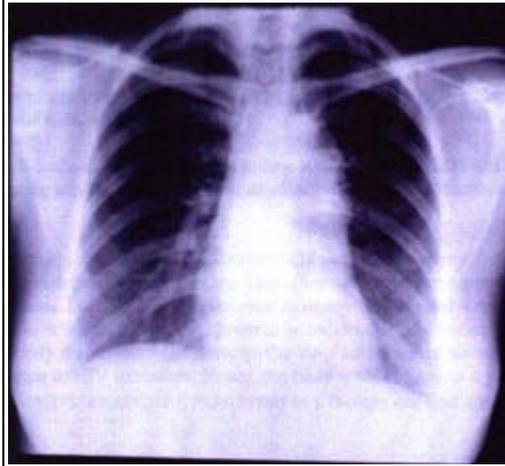

BEFORE: Liver metastasis in 42 yr old female (benign congenital cyst circled).

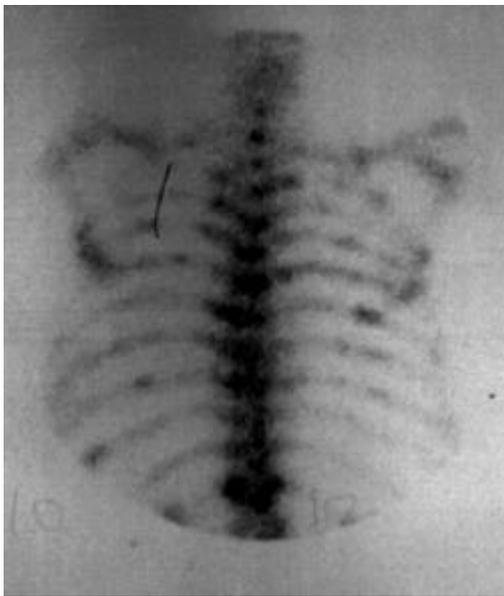

AFTER: Cancer gone after 2 weeks of therapy.

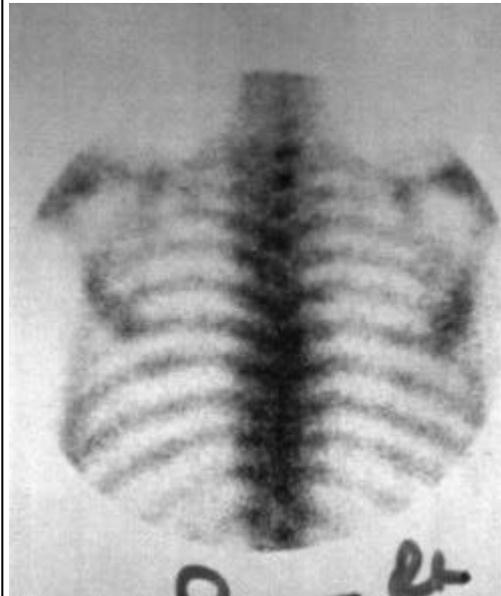

BEFORE: Non-Hodgkin's lymphoma in 32-year-old female.

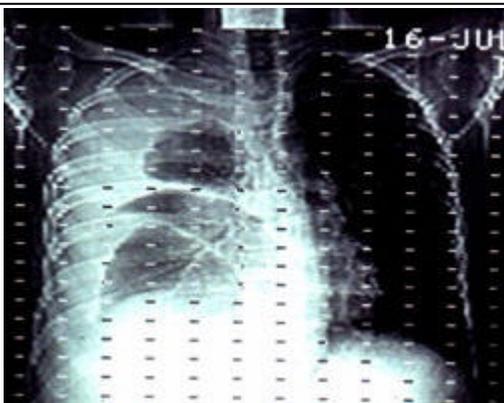

AFTER: Resolution after 2 weeks of treatment.

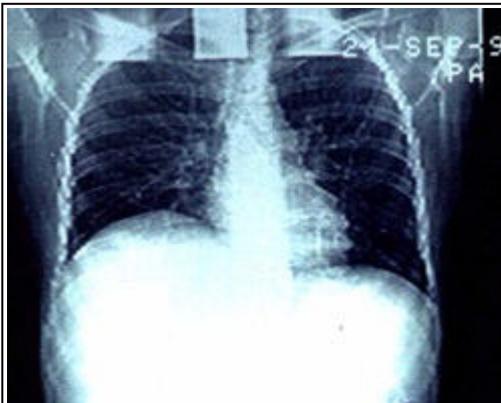

BEFORE: Prostate cancer metastases to ribs in 58-year-old male.

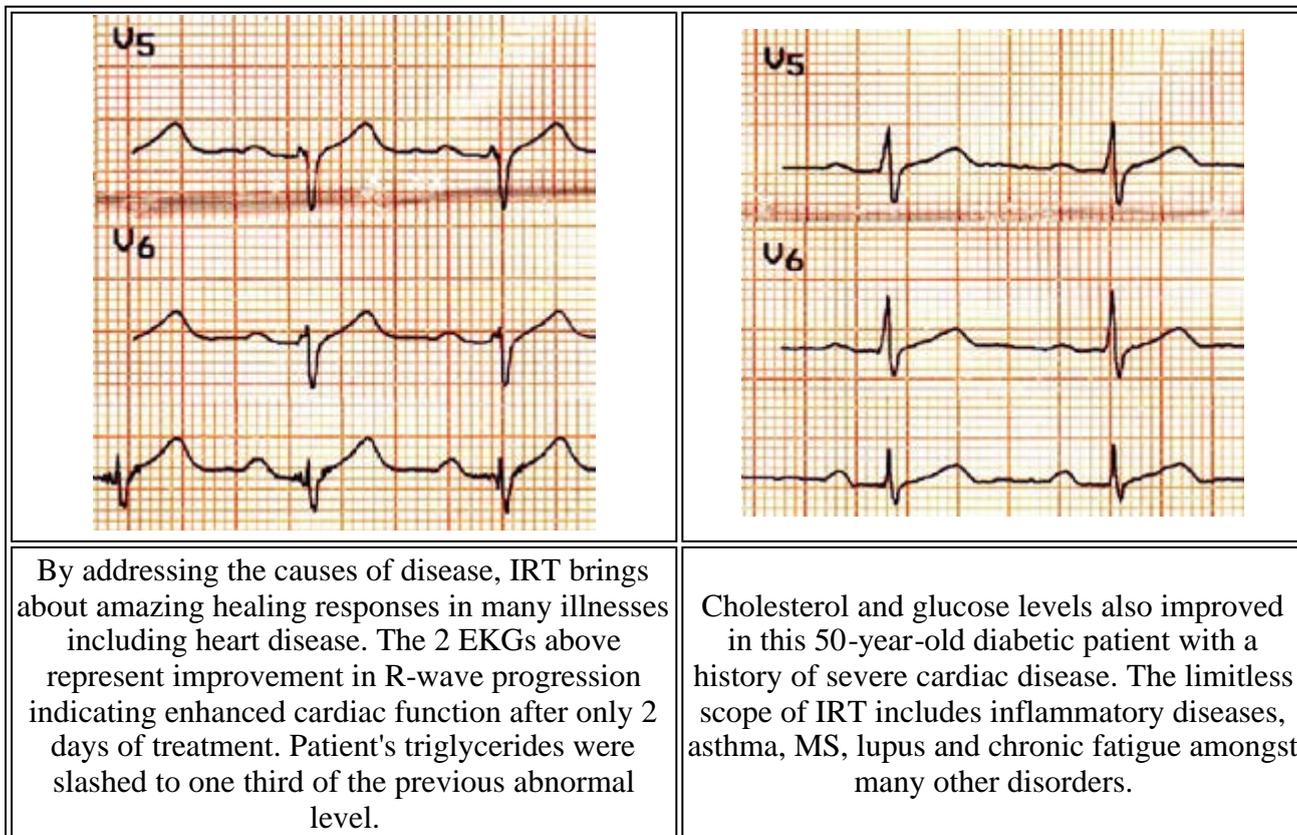

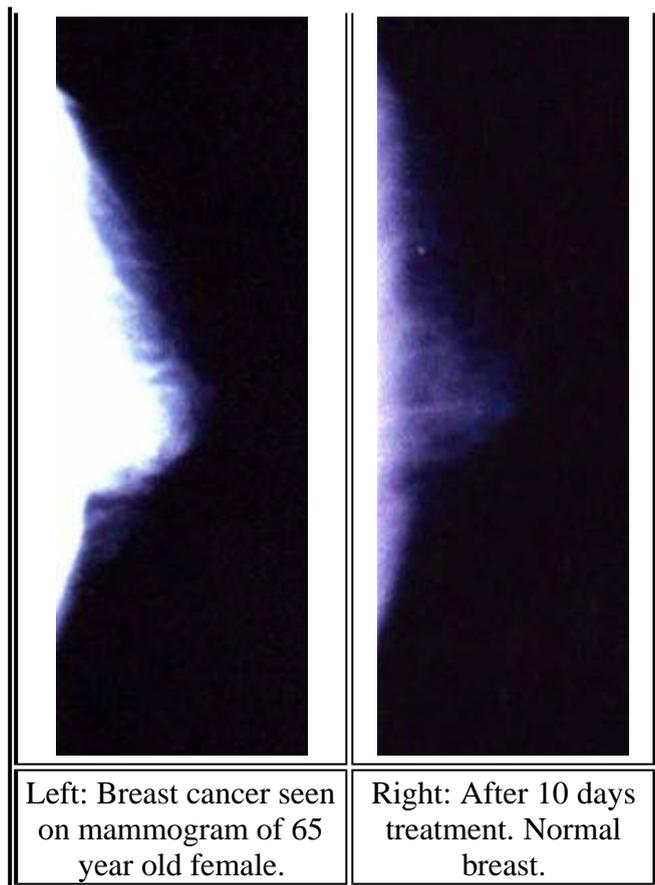

AFTER: Healed ribs after 3 weeks of therapy.

BEFORE: Right lung surrounded by cancer

AFTER: Resolved after 6 weeks of therapy.

## AIDS RESULTS: (Before and after data)

**Case #1: AIDS in 49 yr. old  
male**

**Case #2: AIDS in 32 yr. old  
male**

Before therapy  
viral count 312,000  
T-helper count 150

After one week  
viral count 10,000  
T-helper count 650

Before therapy  
viral count 78,000  
T-helper count 89

After one week  
viral count 7,000  
T-helper count 438

Effects maintained - no  
relapse to date, 1 year after  
treatment.

Clinical & laboratory improvement largely maintained over five  
yrs. to date. Disappearance of pneumocystis pneumonia and  
kaposi's sarcoma lesions within first week of therapy.

### IMPROVING THE SYSTEM

With the realization that the medical system is often rigid and inflexible, the resistance to accept new modalities is understandable. Dr. Chachoua set about developing protocols to introduce safety and efficacy to standard cancer and AIDS therapy.

### AUTOGENOUS CHEMOTHERAPY

The same poisons are offered to cancer patients regardless of age, nationality, sex, etc. Patients and diseases are, however, individual. Chemotherapy is said to work as the fast-dividing cancer cells uptake the poison and die. Cancer cells, however, are not the only fast-growing cells in the body. Immune cells, intestinal cells, and hair cells, amongst others, also grow fast and suffer. Dr. Chachoua developed safe and effective techniques to manufacture tailor-made therapy, that addresses diseased cells and spares, even protects, healthy cells.

### ANTICIPATION

Dr. Chachoua developed both interactive and anticipatory models of treatment where therapies may be continually generated from "living pharmaceutical laboratories" to deal with the disease resistance. Normal medical models are static, disease is met with therapeutic assault and when that fails, the patient dies. IRT not only introduces the concept of interactive therapy but also anticipation where changes in the illness may be predicted and neutralized before they arise. Again anticipation can be used within or alongside conventional therapy. Chemotherapy will destroy cancer cells and give rise to other, resistant ones. Anticipation allows for vaccines to be given to immunize against the new cancer cells before they even arise so that the body can destroy them before they take hold.

### FEASIBILITY AND AVAILABILITY

Horse sera, tagging compounds and autogenous therapy are all within easy registration as they involve non-toxic technology with antecedents. Horse serum, for example, involves a grandfatherable science that predates the FDA. Autogenous therapy represents improvement in current technology and tagging therapy can be achieved with modification of commonly used vaccines.

The main ingredient of a compound used by Dr. Chachoua in the treatment of AIDS and cancer is already FDA approved for kidney disease.

This technology is valid and readily available. The cutting edge of tomorrow's medical breakthroughs - here today.

### THE CONSPIRACY

Dr. Chachoua has lectured around the world and published in order to advise the world of his achievements and realize his dream of allowing the masses to be healed by his technology.

Unfortunately, after years of lectures, public appearances, numerous radio, television newspaper

and magazine appearances, little acceptance by conventional medicine has been evident. Many individuals have attempted to profit by claiming to sell Dr. Chachoua's vaccines and technologies. These are frauds currently under injunction. More surprisingly however, major US institutes which have spent thousands of Dr. Chachoua's dollars independently evaluating and proving in preliminary test efficacy (greater than 99%) against cancer and AIDS have decided to suppress their findings. We worship our doctors as gods who will save us from diseases. If these false gods let us down is it not time to take back responsibility for our lives and our own well-being? Learn of this healing technology and demand to know why it is being withheld.
